

A Deployment-Ready Rural Health Transformation Solution

Closing Rural Follow-Up Care Gaps

Rural providers know the problem well: patients who need follow-up care fall through the cracks, adding to patient safety risk and lost revenue. **Inflo Health delivers a workflow-ready, low-lift solution that:**

1. Identifies patients with a recommendation for additional imaging
2. Navigates them to care, and
3. Produces measurable outcomes...

...without adding staff or more work on your team.

For rural providers, Inflo Health delivers a ready-to-deploy solution that activates rural health transformation goals by reducing missed follow-ups, easing staff burden, and improving patient safety, **while helping you recover revenue that would otherwise be lost.**

Why Now and Why Follow-up

With the launch of CMS's \$50 billion Rural Health Transformation (RHT) program, rural providers have a rare opportunity to secure funding to address long-standing gaps in care. At the same time, these investments bring increased expectations for rapid deployment, measurable results, and long-term sustainability.

Inflo Health delivers a path to meeting RHT goals by closing care gaps created from missed follow-up care. On average, **15% of needed follow-ups stemming from a recommendation for additional imaging (RAI) are not completed.**

Inflo Health solves for this gap by delivering a solution that:

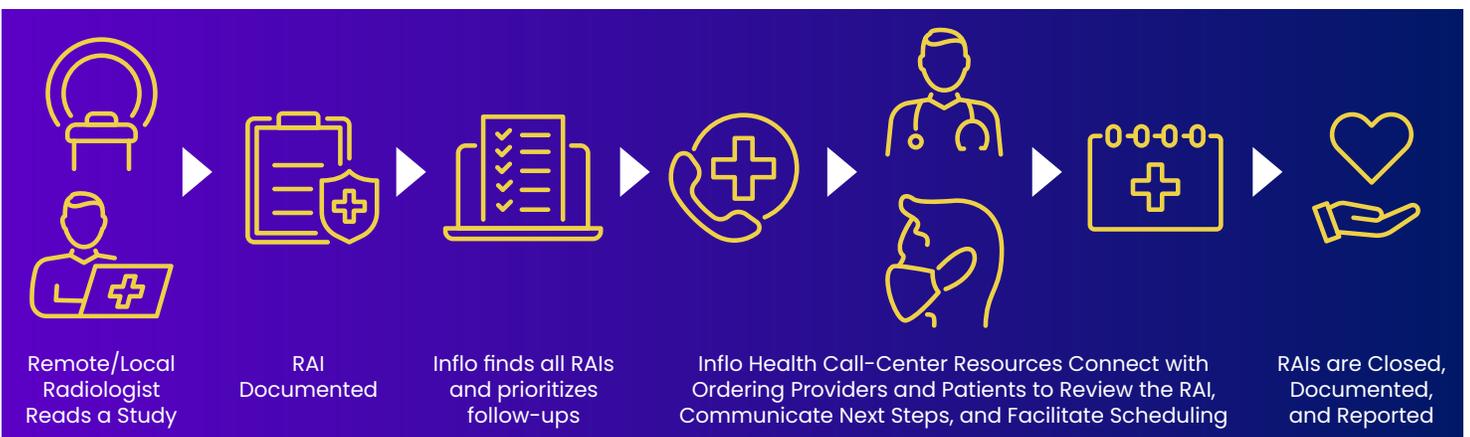

- Is operational in weeks (*we only need access to the data you already have*)
- Delivers clear and measurable impact (*every closed follow-up is hundreds back in revenue*)
- Provides the reporting and insight you need to comply with your state's RHT guidelines
- Delivers access to additional staff and resources—all within one, flat price

How it Works: End-to-End Follow-Up

Inflo Health closes care gaps by:

- Identifying patients with follow-up recommendations made by your local or remote radiology team
- Prioritizing patients by urgency and next step in care
- Navigating patients and providers through outreach and ordering using Inflo Health's call center resources
- Tracking appointments through completion and reporting outcomes

The result is safer care for patients and recaptured revenue for rural providers..

Designed for RHT Funding Success

Inflo Health enables rural organizations to implement award-ready RHT projects by addressing the common, scalable challenge of missed follow-ups.

Built to meet rural providers where they are, Inflo Health:

- Fits existing workflows and staffing models with no rip-and-replace or custom builds
- Minimizes staffing impact through a centralized call center that manages patient and provider outreach
- Delivers fast, reportable outcomes including follow-up completion, time to care, and recovered revenue from day one
- Supports regional coordination with standardized workflows that scale across hospitals, clinics, and partners
- Remains sustainable beyond grant funding by reducing operational strain while protecting reimbursement

By combining automation with centralized outreach, Inflo Health turns RHT funding into durable, system-wide impact—closing follow-up gaps, expanding patient reach, and strengthening rural care delivery.

Need Support with Your RHT Funding Request?

The Inflo Health team is available to support your RHT funding request, including defining expected outcomes and measurable goals that will guide our partnership.

With extensive experience in quality improvement and reporting—through our partnership with the American College of Radiology—we can quickly deliver the data, metrics, and communication support needed to strengthen your application and support funding success.

Inflo Results across Underserved Health Systems

Inflo Health has a proven track record of supporting underserved providers by helping them manage follow-up care with limited staff and resources. We are deeply committed to rural health and design our solutions to work in real-world rural settings, not ideal conditions. Our focus is on ensuring patients receive timely follow-up care, improving outcomes, and reducing the risk that patients fall through the cracks.

*

Jackson Hospital

- Doubled follow-up closure rate
- 6X increase in revenue recaptured
- 31% increase in average reimbursement
- Reduction in questions and inquiries from referring providers
- Decreased demands on staff and internal resources

St. Tammany Health System

- 100% patient census coverage
- 74% closure for RAIs
- 34% closure rate increase
- Decreased in admin tasks and operational drag
- Increased organizational capacity and visibility
